

**Remember each
and every mole.**

 **HEINE** Digital documentation from the
inventor of the dermatoscope.
DERManager

Digital management made simple.

Intuitive and fast, the new HEINE DERManager supports the capture and visualisation of dermatoscopic image data. In skin cancer screening, the data can supplement progression monitoring.

You do not need expensive hardware. The preferred tools to use with the software, to create top-quality images, are our HEINE iC1 or the other HEINE dermatoscopes and an iPhone*. But it is compatible with other instruments too.

The **number of users, devices and rooms is unlimited**, and there are no annoying cables getting in your way. One welcome side benefit is fast-track patient care thanks to flexible room occupancy and shorter waiting times.

And the **HEINE DERManager** does more than just **improve the workflow in the practice**, it has a positive impact on **patient engagement** too, because it allows practitioners to discuss dermatological images, aesthetic progress and/or further treatments immediately and clearly with the patient on a smartphone, tablet or PC.

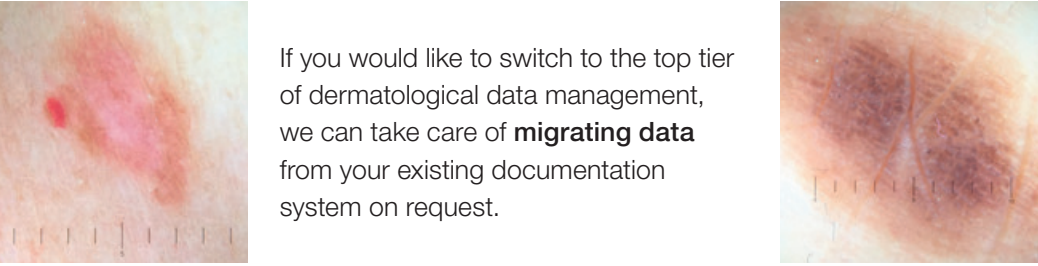

Backup copies of all your data are mirrored. **After all, as the saying goes, better to be safe than sorry.**

The **Small Package** allows you to store up to 5,000 images and it is usually what you start with. You can upgrade when you want to save more images.

All the data is stored securely in accordance with the **European Union's stringent General Data Protection Regulation (GDPR)**. It is stored on a high-security server in Germany, which naturally complies with all the applicable regulations.

If you would like to switch to the top tier of dermatological data management, we can take care of **migrating data** from your existing documentation system on request.

 **HEINE
DERManager**

3 fair packages:

The Small Package allows you to store up to 5,000 images and it is usually what you start with. You can upgrade when you want to save more images.

The number of users, devices and rooms is unlimited from the outset, and there are no annoying cables getting in your way.

- ▶ Cancellable monthly

Upgrade

24,95 AUD per month

excl. VAT

- ▶ 80,000 images and above;
for an additional 20,000 images each

Good to know.

Experience has shown us that a dermatologist captures on average between 1,800 and 2,200 images annually, and bills for the majority of them. This is one piece of information that you might want to include in your calculation.

Try before you buy.

Another fabulous feature is that your first month of use is a trial month. All you are charged is a single cent as a symbolic gesture. Nothing else will be debited from your account if you cancel at any time within the first 4 weeks.

What are you waiting for?

The next steps are simple: Choose a package. Download the app. Get cracking. Details on the future of dermatology are always available at heine.com/en/dermanager or can be retrieved by scanning this QR code:

Storing data on site?

HEINE has a solution for that too! The Cube powered by HEINE DERManager. Please contact us if you're interested: derm@heine.com
